Summary:

This is Global Level Sales and Profit Analysis the datasets are taken from Kaggle. The dataset has 1,00,000 Sales Records with 14 Unique Columns.

Basic Info

Metric	Value
Total Rows	100,000
Columns	14
Date Range	Jan 2010 – Jul 2017
Countries	185+
Regions	7
Item Types	12
Nulls	0

Financial Overview

Metric	Value
Total Revenue	\$133.6 Billion
Total Cost	\$94.2 Billion
Total Profit	\$39.4 Billion
Overall Profit Margin	29.50%

By Region

Region	Revenue	Profit	Orders
Sub-Saharan Africa	\$34.9B	\$10.3B	26,019
Europe	\$34.2B	\$10.1B	25,877
Asia	\$19.3B	\$5.7B	14,547
MENA	\$16.9B	\$4.9B	12,580
Central America	\$14.5B	\$4.3B	10,731
Australia & Oceania	\$10.7B	\$3.2B	8,113
North America	\$2.9B	\$0.9B	2,133

By Item Type (Profit Ranked)

Item	Profit	Revenue
Cosmetics	\$7.3B	\$18.3B
Household	\$6.9B	\$27.7B
Office Supplies	\$5.3B	\$27.5B
Baby Food	\$4.0B	\$10.7B
Cereal	\$3.7B	\$8.7B
Clothes	\$3.1B	\$4.6B
Vegetables	\$2.6B	\$6.4B
Meat	\$2.4B	\$17.6B
Fruits	\$98M	\$380M

Visualization & Observation:

1. Total Revenue & Profit Areas:

Observation:

In the Total Revenue & Profits Charts give insight about the most profit and main area of businesses to grown and scale

1. **Sub-Saharan Africa** is most profitable and revenue generating region gave profit around \$34Billion.
2. **Europe** is 2nd most profitable and revenue generating region after Sub-Saharan Africa.
3. **Asia** is 3rd most profitable and revenue generating region after Europe.
4. **Middle East and North Africa & Central America and The Caribbean** is 4th region with middle level of Profit and Revenue as compare to Previous one.
5. **Australia and Oceania** are lower-mid profit and revenue region of company.
6. **North America** is lowest once that cause very less profit and revenue region of company.

Sub-Saharan Africa and **Europe** together drive 50%+ of global profit, but North America's near-absence from the portfolio represents the single biggest growth opportunity in the entire business.

2. Total Units Sold:

Observation:

This chart visualizes total unit sales across all 12 product categories in the global market.

Some key insights are:

1. **Office Supplies** are most sold Product globally.
2. **Cereal** is 2nd most sold product globally.
3. **Cosmetics** are 3rd most sold product globally.
4. **Vegetables & Fruits** are most least product sold globally as compared then other's products.
5. **Distribution is uniform** in this chart we clearly see that all product is near to each volume which make its slight uniform to each other. Which make it silently uniform.
6. High volume does not equal high profit

By using a filter, we can clearly see the insight of different types of products with its colour.

3. Profit / Loss by Products:

Observation:

Overall map show that Sum of Total Profit for each country. Colour range start from Red to Green for -50M to 250M Profit range to find is any country can cause losses is show in red colour and profit have green and goes to high deep if profit is more

By observing the Map, we conclude that all country is giving profit with different deep green pattern's

High Profit Countries:

United States of America — one of the darkest green, highest profit.

Australia — very dark green, strong profit.

Canada — dark green, good profit.

Russia — large dark green country in Asia.

China — performing well, dark green.

Medium Profit Countries:

Most of Europe — medium green (UK, France, Germany, Sweden etc.).

South Korea, Taiwan, Philippines — moderate profit.

South Africa, Morocco — mid range in Africa.

Low Profit Countries (but NOT loss):

Kazakhstan — visibly lighter/different shade.

Central Africa region — lighter green, lower profit.

Middle East countries — some lighter shades (Libya, Afghanistan etc.).

Small island nations — very low profit due to small market size.

The world map shows profit distribution across all countries. All countries are profitable with no losses recorded. USA and Australia lead with highest profits shown in dark green. Africa and Middle East regions show comparatively lower profits shown in lighter shades. Europe maintains consistent moderate profit levels across all countries.

4. Items Type Profit %:

Observation:

This is Tree Map that show different Percentage of Profit come from Product Varieties. Bigger box = Higher profit margin %, Darker colour = Higher % of total profit contribution.

Top Performing Items (High Profit Margin):

1. **Clothes** - 67.20%
2. **Cereal** - 43.07%
3. **Cosmetics** - 40.98%
4. **Vegetables** - 39.77%

Mid Performing Items (Mid Profit Margin):

1. **Baby Food** - 37.55%
2. **Snacks** - 36.14%
3. **Beverage** - 33%
4. **Personal Care** - 30.66%

Low Performing Items (Low Profit Margin):

1. **Fruits** - 25.83%
2. **Household** - 24.80%
3. **Personal Care** - 30.66%
4. **Office Supplies** - 19.39%
5. **Meat** - 13.56%

5. Market Area by Profit % (Bubble Map):

Observations:

Market Area by Profit % (Bubble Map) show actually difference:
Bigger bubble = Larger % difference (positive or negative),
Range is -7.56% to +8.50%,
Positive % = Profit margin improved,
Negative % = Profit margin declined.

Top Gaining Countries (Positive Growth):

1. Iceland with 5.91%
2. Mongolia with 6.92%
3. USA with 4.11%
4. India with 3.17%
5. Pakistan with 2.75%
6. Madagascar with 2.45%
7. Russia with 2.00%

Declining Countries (Negative % — Loss in Margin):

1. Mexico with -2.44%
2. Panama with -2.90%
3. South Africa with -0.86%
4. Vanuatu with -2.21%
5. The Gambia with -1.62%

"The bubble map shows the percentage difference in profit margin by country compared to the previous period. Mongolia and Iceland show the highest growth at 6.92% and 5.91% respectively. USA also performs well at 4.11%. Mexico and Panama are the notable decliners in the Americas. Europe shows the highest market density with mostly positive growth. Overall, most countries show stable or improving profit margins with only a few showing declines."

6. Profit Margin Trend — Full View (with Reference Line):

Observation:

The profit margin trend from 2010 to 2017 shows a consistent zigzag pattern around an average of approximately 29.75% shown by the dashed reference line. Most months alternate between going above and below this average. The year 2010 performed best with margins mostly above average. The period 2012 to 2013 was the weakest, staying below the reference line the longest. Despite short term fluctuations, the overall profit margin remained flat with no long-term improvement over 7 years.

Above Reference Line (Better than Average):

- **2010** — starts strong, mostly above the line.
- **Early 2011** — peaks well above average.
- **Early 2012** — good performance.
- **Mid 2016** — \$173.17 cost period, clear green spike above line.
- **Late 2017** — ends above average.

Below Reference Line (Worse than Average):

- **Late 2011** — \$196.75 cost, dips below line.
- **2012-2013** — longest period below the reference line.
- **Late 2014 to 2015** — \$203.04 highest cost, deepest dip.
- **Mid 2016** — \$194.08 dips below again.

7. Sales Channel Analysis:

Observation:

The sales channel analysis compares offline and online revenue for 12 item types from 2010 to 2017. Household and Office Supplies are the top revenue earners in both channels consistently above 1700M. Beverages and Fruits are the weakest categories staying below 200M. Both offline and online channels show very similar revenue patterns throughout all years. Revenue remained stable from 2010 to 2016 but shows a sharp decline in 2017 across all categories in both channels. This 2017 drop is the most significant trend and may indicate incomplete data or a major business disruption.

Top Revenue Items (Both Channels):

1. **Household (dark yellow):** 1700M – 1900M.
2. **Office Supplies (teal):** 1700M – 1900M.
3. **Cosmetics (green):** 1200M – 1300M.
4. **Meat (yellow):** 1100M – 1300M.

Low Revenue Items (Both Channels):

1. **Beverages (light blue):** 100M.
2. **Fruits (light green):** 50–200M.
3. **Office Supplies (teal):** drops sharply in 2017.
4. **Vegetables (pink):** 200–300M.

Offline vs Online Comparison:

Offline Channel:

- Household and Office Supplies dominate consistently 1700M–1900M.
- Most items show stable flat trend 2010–2016.
- Sharp drop in 2017 for almost all items — big concern.

- Cosmetics stays strong around 1200M throughout.

Online Channel:

- Very similar pattern to offline — almost mirror image.
- Household still leads at top.
- 2017 shows same sharp decline as offline.
- Cosmetics starts higher online (1280M) vs offline.

Key Insights to Write

1. Household and Office Supplies are the top revenue generators in both channels
2. Beverages and Fruits consistently generate the lowest revenue
3. Offline and Online channels show very similar patterns — almost identical trends
4. Revenue was stable from 2010 to 2016 with minor fluctuations
5. 2017 shows a sharp decline across all items in both channels — biggest drop
6. Cosmetics is the third highest revenue item consistently
7. Online channel slightly outperforms offline for some categories like Cosmetics
8. Meat revenue gradually increased from 2010 to 2014 then stabilized.

8. Top Sales in Online:

Observation:

The online sales area chart shows total sales across 7 regions for 12 item types. Sub-Saharan Africa and Europe are the top performing regions with approximately 130K sales each. Asia comes third with around 72K followed by Middle East, Central America and Australia. North America is surprisingly the lowest online sales region at only 12K despite being a strong profit contributor. Baby Food is the dominant item type across all regions while Vegetables contribute the least. Sales show a consistent declining trend from Africa and Europe towards North America.

Regional Ranking (High to Low):

Rank	Region	Approx. Total Sales
1	Sub-Saharan Africa	130K
2	Europe	130K
3	Asia	72K
4	Middle East & North Africa	62K
5	Central America & Caribbean	50K
6	Australia & Oceania	40K
7	North America	12K

9. Top Sales in Offline (Area Chart by Region & Year):

The offline sales area chart shows regional sales from 2010 to 2017 broken down by year. Sub-Saharan Africa leads with approximately 130K offline sales followed by Europe at 112K. North America is the weakest region in offline sales at only 12K similar to online channel. The year bands clearly show that 2010 had the highest offline sales and each subsequent year shows thinner bands confirming a consistent decline in offline sales over 7 years. By 2017 offline sales had dropped to almost negligible levels. This declining trend in offline sales suggests customers may be shifting towards online purchasing over time.

Regional Ranking (High to Low):

Rank	Region	Approx. Total Sales
1	Sub-Saharan Africa	130K
2	Europe	112K
3	Asia	72K
4	Middle East & North Africa	48K
5	Central America & Caribbean	38K
6	Australia & Oceania	38K
7	North America	12K

10. Top Offline & Online Sales by Product (Bar Chart):

Observation:

The bar chart shows total revenue split by offline and online channels for 12 item types. Household and Office Supplies are the clear top revenue earners at approximately 28 billion each — far ahead of all other categories. Cosmetics and Meat follow at around 17-18 billion. Fruits is the lowest performing product with almost negligible revenue and nearly zero online sales. Most products show an almost equal split between offline and online channels indicating a well-balanced sales strategy. The top 2 products alone contribute more revenue than all remaining 10 products combined.

Revenue Ranking by Item Type:

Rank	Item	Offline	Online	Total
1	Household	14B	14B	28B
2	Office Supplies	14B	14B	28B
3	Cosmetics	10B	8B	18B
4	Meat	9B	8B	17B
5	Baby Food	5B	5B	10B
6	Cereal	4B	4B	8B
7	Snacks	3B	3B	6B
8	Vegetables	3B	3B	6B
9	Clothes	2B	2B	4B
10	Personal Care	1.5B	2B	3.5B
11	Beverages	1B	1B	2B
12	Fruits	0.2B	0B	0.2B

11. Top Product by Profit (Bar Chart):

Observation:

The top product by profit chart shows Cosmetics as the most profitable item at approximately 7,400 million followed by Household at 6,800 million and Office Supplies at 5,400 million. Fruits is the least profitable product with barely 100 million in profit. An interesting finding is that Cosmetics ranks only third in revenue but first in profit showing it has the highest profit margin among all products. Meat on the other hand generates high revenue but ranks low in profit indicating thin margins. The top 3 products — Cosmetics, Household and Office Supplies — contribute significantly more profit than all remaining 9 products.

Key Insights:

1. Cosmetics is the most profitable product at 7,400M despite being only 3rd in revenue.
2. Household and Office Supplies lead in revenue but Cosmetics beats them in profit — showing cosmetics has the best profit margin.
3. Fruits is the least profitable at only 100M — almost invisible bar.
4. Meat has high revenue (17B) but low profit (2,400M) — low margin product.
5. Clothes has low revenue but decent profit — efficient low-cost product.
6. Big gap between top 3 and rest — Cosmetics, Household, Office Supplies far ahead.
7. **Personal Care, Beverages, Fruits** are the bottom 3 — consistently weak performers.
8. Baby Food and Cereal are strong mid-tier profit earners around 3,800–4,000M.

Conclusion:

1. Sub-Saharan Africa & Europe are the twin engines of the business:

Together they generate over 50% of total global revenue (\$34.9B + \$34.2B = \$69.1B) and profit (\$10.3B + \$10.1B = \$20.4B). Both regions rank #1 and #2 in online and offline sales. Any strategy that protects and grows these two markets will safeguard more than half the company's entire global revenue base.

2. North America is the single biggest untapped opportunity:

Only \$2.9B revenue Only 2,133 orders North America contributes just 2.2% of total revenue — the lowest of all 7 regions — yet the USA shows a profit margin growth of +4.11% in the bubble map. This contradiction (low volume, strong margin) strongly suggests North America is under-penetrated, not unprofitable. Targeted expansion here could add billions in high-margin revenue.

3. Cosmetics is the star product — high revenue AND highest profit:

\$7.3B profit — #140.98% margin Despite ranking only 3rd in revenue, Cosmetics earns the most profit of any product. It outperforms Household and Office Supplies — which both generate \$27B+ in revenue — in absolute profit. This makes Cosmetics the most capital-efficient product in the entire portfolio and the primary candidate for investment and scale-up.

4. Profit margin has been flat for 7 years — a silent crisis:

29.75% average — unchanged 2010–2017 The trend chart shows a consistent zigzag pattern around the same reference line for 7 full years with no upward trajectory. Despite growing revenues, margins have not improved. The 2014–2015 period recorded the deepest dip (cost \$203.04) and 2017 shows a sharp revenue decline across all channels. Without structural margin improvement, revenue growth alone will not increase profitability.

5. Online and offline channels are near-mirrors — balanced but both declining:

The channel analysis reveals almost identical patterns in offline and online revenue for all 12 product types — a sign of a well-balanced dual-channel strategy. However, both channels show the same sharp 2017 decline, which points to a systemic issue (data incompleteness, market disruption, or structural demand drop) rather than a channel-specific problem. Cosmetics performs slightly better online, suggesting digital-first marketing would amplify its already strong profitability.

6. Clothes has the highest profit margin (67.2%) but is severely underleveraged:

67.20% margin — #1 of all products Only \$4.6B revenue Clothes generates the highest profit margin in the entire product portfolio — by a wide gap over Cereal (43.07%) and Cosmetics (40.98%) — yet it ranks near the bottom in total revenue. This is the clearest hidden opportunity in the dataset: a product that is extremely profitable but not being sold at scale.
